Sub: OMEGA Food Grade Grease 58

Dear Sir,

This is with reference to your Omega-58 grease which we have been using for our bearings lubrication particularly in water environment like ETP. The results have been very good and bearing failures at ETP floating aerators have come down from previous once/twice a month to nearly zero for the past two months. This has resulted in extremely low downtime and bearing savings.

Regards.

For HINDUSTAN LEVER LTD.

Dear Mr. Collins David,

As you are well aware that we are having Rotary Furnace which keep running round the clock and the main fuel for running this furnace is LDO.

Before using your product Omega 903, we have continuously faced problems in the Spray nozzle that clogged frequently due to the rust, dust, and residue and other contamination in LDO and inturn hampered free flow of Fuel burning.

At this juncture we have started using your product Omega 903 to our LDO storage tank in the ratio of 1:2000 litres and find out very much useful and the Omega 903 reduce considerably clogging in the nozzle and enhance the flow very freely in our Furnace. We are also using Omega 77, 58, 904, 73, 85, 690, 907, 909. We find them very satisfactory.

Thanking you,

Yours faithfully,  
for AAG ROLA MAGNETICS P LTD

To Whom It May Concern:

In December 2005 Ms. Ozlem Olcay Introduced Omega Lubricants to us. We had problems in the lubricants used in the oven the grease we were using was dripping which caused loss in time and spare parts .

Miss Olcay offered the Omega 78 the extreme high temperature grease which ended our problems in this place.

We are also using Omega 585 the synthetic food grade chain and gear box lubricant in our Gear boxes and chains and Omega 58 Super food grade grease in our bearing.

We are very satisfied with these products and the service given by your representative.

Regards
