Dear Mr.Natraj

Re : Omega / Corium Products Supplied for Repairs & Maintenance

Corium 10R – Liquid Rust Remover - We simply soak the Screw heads in a bath of Corium 10R which has severe corrosion and cancerous rust. In few minutes, we take out a brand new looking metal part which is completely free from rust and corrosion. Further there is no brushing or scrubbing required. Perhaps the only chemical which we have found very user friendly and non-hazardous in handling.

Omega 690 – 85w140 used in Winding Machines Gear Boxes

Omega 615 – ISOVG 46 – Used in FINI Reciprocating Screw Compressors

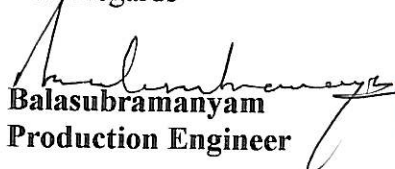

Omega 99 - Rust Preventive Coating and Anti-Seize use with fixtures / fasteners

Omega 636 – General Maintenance Oil to clean metal parts and nut/bolt release agent.

Omega 612 – SAE 10 – Winding Machine Hydraulic Oil Systems

All products mentioned above have been useful to cut maintenance costs and reduce downtime with extended man hours with job works. Omega/Corium products certainly comes as a readymade solution and handy with our assembly and maintenance operations. We have no hesitation to recommend the use of these products for the maintenance industry.

Best Regards

Balasubramanyam
Production Engineer
